DATA INCLUSIONS AND LIMITATIONS: Data sources often differ in what is included or excluded. The following are guidelines for the data used in this report. The fact that various export studies report different numbers is often explained by whether or not it includes or excludes some of the following items or trade patterns.

1. Shipments between the 50 states, Puerto Rico, and U.S. island possessions (Virgin Islands, Guam, etc.) are excluded from the data on which this report is based.

2. Shipments in transit from one country to another through the U.S. are excluded.

3. Shipments to U.S. Armed Forces and Diplomatic Missions abroad for their own use are excluded.

4. Shipments under P.L. 83-480 (Agricultural Trade Development and Assistance Act) and P.L. 87-195 (Act for International Development) are included.

5. Agricultural commodities covered in this report consist of non-marine food products and agricultural products that have not passed through complex manufacturing processes. Raw hides and skins, vegetable and animal fats and oils, and unrefined wines are included. Such manufactured items as textiles, leather, boots and shoes, baked goods, and distilled alcoholic beverages are not included.

6. Both the California Crop and Livestock Reporting Service and the U.S. Department of Commerce are constantly updating and revising data. The most recent available revision was used at the time of the assembly of this report, April-June 1981.

INFORMATION SOURCES: The following is a list of major sources used in this report.

U.S. Department of Commerce, Bureau of the Census, Foreign Trade Division data series EM546, U.S. Exports, Schedule B Schedule by Schedule B Number by Unit Control by Country of Destination, available on microfiche or magnetic computer tape.

U.S. Department of Agriculture publications: Foreign Agriculture, U.S.D.A. News Weekly Round-up of World Economic Conditions in Relation to Agricultural Trade, Agricultural Outlook, and periodic releases of the Crop Reporting Board.

Federal/State Market News Service Publications. Frequent market reports sometimes include exported commodities.

Marketing Organizations and Individuals. Many people supplied opinions and information about the commodities with which they are professionally involved. We wish to thank all those who contributed their expertise.

INTRODUCTION: This 1980 estimate of California's agricultural exports continues the calendar year data series and expands the destination data section. Although still in need of analysis and refinement, it is hoped that including copies of computer printouts on all Asian destinations will assist California growers and exporters in their sales expansion plans.

Using a calendar year basis complicates comparisons of exports to crop data with varying crop or marketing year cut-off dates. Where crops are harvested late in the year and marketed throughout the following year (e.g., cotton, almonds), the comparisons shown are with the production of the preceding year. Please note footnotes to Table 3 to ascertain whether this delayed comparison system has been used.

The comparisons of both California and U.S. crop values to exports in Table 3 are calculated using average farm level prices at the state and national level. Since exported produce is often of higher than average quality and may represent off-season high value produce in some categories, the use of average prices probably underestimates the value of the exported portion of the crop.

Farm values and quantities used to compare exports to the total crop were taken from existing publications of the California Crop and Livestock Reporting Service and the U.S. Department of Agriculture's Statistical Reporting Service published material. Conversion of commodities from export form to farm production units was done using Statistical Bulletin No. 362, Conversion Factors and Weights and Measures for Agricultural Commodities and Their Products. Table 5 comparisons between California and U.S. total exports are done solely on export values.

Destination data for U.S. agricultural exports of commodities included in Table 5 are shown in Table 6. Using this data and estimates of the portion of the U.S. exports that are grown in California (Table 5) the reader may arrive at his or her own conclusions on specific destinations for California grown products based on this data plus knowledge of shipping patterns, seasonality and other factors associated with each commodity. Summaries of U.S. exports to Asian destinations are shown in Table 7 with quantity and value shipped by air and by sea plus a total shipped from the three California port districts. No further refinement of this destination data has been performed due to budget and time limitations. It is hoped that the unprocessed data presented here will be useful to readers in assessing market potential.

The final estimates of California's agricultural exports were made using the port data, information from the Canadian government on unloads of fresh fruits and vegetables and by contacting representatives of commodity groups, exporters, and handlers to obtain their opinions. Each commodity was treated separately and the estimate was made on the best available information. It should be emphasized that these are estimates since exact data do no exist for this material.

HIGHLIGHTS OF CALIFORNIA'S AGRICULTURAL EXPORTS
CALENDAR YEAR 1980

Table 1

Rising to $4 billion in value during calendar year 1980, California's agricultural exports showed a 43% increase in value over 1979, considerably exceeding the total U.S. agricultural exports increase rate of 19%. Most dramatic among California's increasing agricultural exports were eggs and rice. All poultry products together registered a 182% increase and rice (including milled rice and by-products) showed a 117% increase when 1979 is compared to 1980 on a value basis. Wheat, oranges, grapefruit, dry beans and dates all increased by more than 60%.

When compared to the first estimate of California's agricultural exports made for 1962, the value going into international trade from California's farms and ranches has increased almost 800%. The rising relative importance of agricultural exports is demonstrated by comparing this increase to the general price level: the index of prices received by farmers increased 300% over the same 18-year period.

Utilizing 36% of the harvested cropland in California, the importance of international trade to California growers and ranchers is gaining annually, having risen from 32% in 1979. This increase is equivalent to an additional 350,000 acres being used to grow produce for the international market and the current total cropland used for exports is 3.2 million acres. This estimate is based on calculating the acres needed to produce the quantity exported at state average yields.

When the estimated farm level value of exports is compared to total farm marketings, 23% are now being sold abroad. Without this international market, California's ranchers and growers would find it difficult to sell all they produce on the domestic market. The 1980 increase in egg exports demonstrates how opening new markets abroad has stabilized the market and prevented a domestic supply disruption.

U.S. agricultural exports are expected to pay for one-half of our nation's oil imports during the current fiscal year. The U.S. agricultural trade surplus is projected to be $30 billion during fiscal 1981 (Oct. 1-Sep. 30) and California agriculture's share in the balancing of our international trade account could be $3 billion -- a substantial contribution to our ability to buy autos, TV sets, coffee, and other integral parts of our American standard of living that are manufactured or grown abroad.

Cotton is again California's leading export commodity with 28% of the total value being represented by cotton lint alone. Almonds increased their share of California's exports from 10 to 11%. Rice rose to third place followed by wheat, grapes, oranges, and lemons. Within the 1980 list of 25 leading commodities as compared to 1979, chickens and eggs rose while cattle and cattle products fell, dates were included for the first time, and celery dropped below the $13 million value required to make the list.

CALIFORNIA'S AGRICULTURAL EXPORT PROFILE, 1980

Table 2

Combining data from Tables 3 and 5 with an estimate of the acreage needed to produce the exports provides a profile of California's exports showing the importance of exports within the state and the national picture on a commodity basis. The estimated acreage relates exports to land utilization, a subject of growing concern within California's political realm.

Expanding cotton exports have reached the point where seven out of eight bales of the California crop are going into international trade, an amount that constitutes 43% of the U.S. exports. Since California does not produce the extra long (Pima) staple nor the shortest staple (less than 1 inch) this is based on the exports of medium staple lengths only. Utilizing an estimated 1.4 million acres of cropland, cotton's dominance reaches 45% of all California cropland producing for export. This is calculated using state average yields.

Markets for California rice and wheat were nearly four-fifths abroad in 1980 and these two grains account for more than one million acres of cropland. Together with cotton, these three extensive type crops utilize 78.6% of the estimated acreage devoted to export crops.

In addition to cotton, rice, and wheat mentioned above, other export crops that utilize more than 50,000 acres are almonds (192,000), oranges (95,000), dry beans (84,900), alfalfa hay (63,100), all grapes (59,950), and walnuts (55,700). Livestock products were not included in this estimation of cropland used to produce exports since their utilization of land is often indirect and some feeds used in California are produced in other states.

It is in the specialty crops that California's dominance of the U.S. exports is most evident. In 11 of the leading crops, California produces 100% of U.S. exports. These include almonds, apricots, dates, figs, raisins, olives, Clingstone peaches, prunes, walnuts, garlic, and ladino clover seed. In an additional 14 crops California produces more than half of U.S. exports including: fresh grapes (99.0), broccoli (98.6), processing tomatoes (87.9), lemons (80.5), plums (79.9), strawberries (76.0), lettuce (73.9), crushed grapes (72.6), Freestone peaches (71.7), celery (65.2), rice (62.7), oranges (58.2), dry beans (51.2), and pears (50.6).

COMPARISON OF CALIFORNIA'S AGRICULTURAL PRODUCTION WITH ESTIMATED EXPORTS
TABLE 3

Working from quantities of exports rather than value at the port of embarkation as in Table 1, the farm level value of California's agricultural exports is shown in Table 3 with a comparison to the total state production as estimated by the California Crop and Livestock Reporting Service. State average prices for 1980 are used in arriving at the farm level value of each commodity. A comparison of California to U.S. exports is arrived at the same way using quantities exported valued at national average farmgate prices.

Working with calendar year export data presents problems of comparison to the harvest period or marketing year of different crops. In cases as noted, the comparison has been made with the previous calendar year's crop since considerable delay is encountered in shipping products harvested late in the year.

As in 1979, California's two leading agricultural exports, cotton and almonds, constitute nearly 40% of the total value. When rice, wheat, and grapes are added to cotton and almonds, 60% of the total export value is included. As in previous years it is evident that careful building of foreign markets by producers' organizations has helped sustain the leadership of cotton and almonds as California's leading exports.

FIELD CROPS:

Heavy dependence on foreign markets is especially evident for cotton lint (87.5%), rice (79.8%), and wheat (78.1%). Dry bean sales abroad accounted for 41.9% of California's production and more than one-half of the ladino clover seed also was sold overseas along with one-tenth of the alfalfa seed.

FRUIT AND NUT CROPS:

Almond exports have continued to expand in quantity and value even though the proportion of the crop dropped to 60.7% as a result of 1980 exports being compared to 1979 production. Walnuts also increased significantly in quantity and value as well as the proportion going into international trade. Exports of California dates rose to 8,000 tons due to reduction of access to Middle East supplies in Iraq and Iran. Other fruits that showed noteworthy increases in the proportion of the crop exported include apricots (11.0 to 18.7%), fresh grapes (15.4 to 18.1%), grapefruit (18.5 to 29.0%), and oranges (18.1 to 25.8%).

VEGETABLE CROPS:

Exports are not generally as important to California vegetable growers as to field crop and fruit and nut crop producers. The proportion of the 1980 crop exported is led by onions (29.1%), asparagus (16.0%), and garlic (12.9%). Broccoli and fresh tomato growers send just over 10% of their crops into international trade with the remaining crops extending from celery (7.0%) down to processed tomatoes (2.1%). Canadian purchases are especially important in this commodity group.

LIVESTOCK AND POULTRY:

Until 1980 the livestock and poultry group was relatively less concerned with exports. A notable exception is now seen in the increased exports of eggs. In-shell shipments of eggs from California ports increased 800% between 1979 and 1980. This phenomenal rise gave the entire poultry category a 183% gain, counterbalancing a loss in exports of broilers and chicken parts. Industry representatives indicate most egg sales have been to the Middle East and credit this new market with keeping California's egg producers in business.

NOTE:

Using average prices probably underestimates the value of exports where the foreign market is purchasing selected, high quality produce or most of the exports are in high price, off-season production periods. Conversion to farm level units was done using standard conversion factors for the total amounts, also a source of some possible underestimation of the relative importance of foreign sales that tend to be clustered in selected portions of a product group.

U.S. AGRICULTURAL EXPORTS

Table 4

The total U.S. agricultural export data included here are for comparison to California's exports. The greatest increases from 1979-1980 occurred in poultry, rice, and vegetables, to which California contributed heavily.

TABLE 4. U.S. AGRICULTURAL EXPORTS: VALUE BY COMMODITY, CALENDAR YEARS 1977-80

CALIFORNIA'S SHARE OF THE NATION'S AGRICULTURAL EXPORTS

Table 5

California's estimated agricultural exports for calendar year 1980 are presented in Table 5 on an individual item basis. U.S. total agricultural exports of each item are also shown and the share of the nation's exports provided by California is calculated using this data. Values shown are based on port declarations and include freight, insurance, and port charges. This value is notably different from the farmgate value shown in Table 3.

Using these port values California exports about one dollar in value for each ten dollars of U.S. agricultural exports. Among the listed commodity groups California is providing more than 80% of the fruits and nuts and over half the vegetables, flowers and berries. Because corn, soybeans, oilseed products and tobacco are not among California's principal crops, the percentage of total U.S. agricultural exports is reduced to just under 10%.

The estimate of California's exports is made after considering the amounts being shipped through California's three port districts, U.S. total exports of each commodity, California's share in the national production of that commodity, and obtaining opinions and information from commodity traders and exporters. Additional information was obtained on fruit and vegetable shipments to Canada and various U.S. government publications were consulted.

Each selected commodity was individually studied and for some that are grown only in California (almonds, apricots, figs, dates, raisins, olives, prunes, walnuts, garlic, and ladino clover seed), the national export data are immediately applicable. For others, modifications of the port data were arrived at through the summarization of the individual pieces of information obtained from a wide variety of information sources. (See list on Page 2).

Only when California grown products are not easily identifiable (hides and skins, tallow, meats, and poultry) is the California share of U.S. production used as a major factor in estimating the amount exported originating in California. This system is also used to estimate the "all other" category. The commodities listed in Table 8 were divided into 14 groups following the pattern appearing in "Foreign Agricultural Trade of the United States, January/February 1981." California's share of each category was calculated from the totals in Table 18, pp. 68-73 and applied to the sum of values of the "all other" commodities in each classified group. For example, corn for grain, rye, oats, and sorghum for grain were classified as feed grains and U.S. total exports were multiplied by .0104, the calculated factor for California's share of feed grains. The sum of these calculations became the "all other" total and represents 14% of the total of California's estimated agricultural exports.

DESTINATIONS OF U.S. AND CALIFORNIA'S AGRICULTURAL EXPORTS

Table 6

The destinations of U.S. exports that follow in Table 6 are only a first step to estimating California's markets for agricultural products. Readers can use their personal knowledge of a particular commodity and its international marketing pattern with the estimated share of U.S. exports produced in California shown in Table 5 to arrive at an assessment of current and future sales to various countries. It is anticipated that the proposed expansion of this export statistics project in 1981-82 will make possible a refinement of this data and that more comprehensive destination data will be part of future reports in this series.

Additional information to the U.S. exports by commodity data in Table 6 can be found in the reproduction of U.S. Department of Commerce data shown in Table 7. These basic data show all U.S. agricultural exports to all Pacific rim countries that as a group constitute California's greatest overseas market. By including the entire list of agricultural exports for convenience in computer programming, a number of products not grown or produced in California are included. For this reason the totals exported to any destination must be used with caution since not only products not produced in California (e.g., tobacco, soybeans), but transhipments of agricultural products (e.g., coffee) are included.

Similar data for other countries are available on request from the following sources:

California Crop and Livestock Reporting Service
